

IBTIHEL BLIDAOU

Full-Stack Developer | Software Engineering Student

Kebili, Tunisia | +216 99 985 908 | blidaouiibtihel22@gmail.com | linkedin.com/in/ibtihel-blidaoui | github.com/blidaoui | [Ibtihel Blidaoui — Full-Stack Developer](#)

SUMMARY

Software engineering student with hands-on full-stack experience across two internships, building production features end-to-end — from REST APIs in NestJS to responsive interfaces in Next.js and React, back-end by PostgreSQL. Built a contact-free, gesture- and voice-controlled system for operating-room equipment, combining computer vision and speech recognition. Comfortable owning a feature across the stack, working in Agile teams, and writing secure, maintainable code.

SKILLS

Languages: Python, Dart, Java, JavaScript, TypeScript, SQL, C/C++, PHP, HTML, CSS

Frameworks & Libraries: React, Flutter, Next.js, NestJS, Node.js, Tailwind CSS

Databases & Platforms: MySQL, PostgreSQL, Firebase

Security & Tools: SQLMap, Git/GitHub, Eclipse, VS Code

Methodologies: Agile/Scrum, REST API design

EXPERIENCE

Full-Stack Developer Intern — AURES Group

02/2024 – 05/2024

Kebili, Tunisia

- Designed and built a full-stack click-and-collect restaurant ordering platform covering menu browsing, online payment, and real-time delivery tracking.
- Developed the frontend in Next.js and a scalable REST API in NestJS back-end by PostgreSQL, supporting the complete order lifecycle from cart to checkout.
- Integrated a Python-based chatbot to handle customer inquiries and guide order placement, reducing friction in the ordering flow.
- Collaborated within an Agile team to refine checkout usability and overall user experience based on iterative sprint feedback.

Full-Stack Developer Intern — AURES Group

07/2023 – 08/2023

Kebili, Tunisia

- Built a responsive To-Do List app using React and Node.js with client-side state management and RESTful APIs.
- Contributed front-end and back-end features on internal projects, including UI components and API endpoints.

PROJECTS

HAOR — Hand Assistant for Room Operations

Project

Contact-free surgical control system using gesture and voice recognition

- Designed and developed a contact-free control system enabling surgical staff to operate operating-room equipment via real-time gesture and voice recognition, combining computer vision and speech recognition as control signals.
- Presented and successfully defended the system before an academic jury.

Blind SQL Injection Security Assessment

Cybersecurity Coursework

SQLMap-based penetration test on a self-hosted WAMP environment

- Conducted a Blind SQL Injection penetration test against a self-hosted WAMP environment using SQLMap.

EDUCATION

ESSAT — Degree in Software Engineering

09/2024 – Present

École Supérieure des Sciences Appliquées et de la Technologie Privée de Gabès — Gabès, Tunisia

ISIMG — Bachelor's Degree in Computer Science

09/2021 – 06/2024

Institut Supérieur d'Informatique et Multimédia de Gabès — Gabès, Tunisia

LANGUAGES

Arabic (Native) • French (Fluent) • English (Fluent)
